

RIGHTS PACK — iOS BUILD 6

Rewritten 2026-09-16 to match the binary being submitted. This describes 8 live channels and 8 public-domain films — nothing else. Attachment target: App Review Information.

Rule applied throughout: if the app does not show it, this document does not claim it. A rights pack that disagrees with the binary is worse than no pack, because the reviewer can diff them.

PAGE 1 — WHAT THIS BUILD DOES WITH VIDEO

- We **host no media files**.
- We **do not download, copy, store, transcode, re-encode or mirror** any video or audio.
- We **do not extract, decrypt or restructure** stream URLs from any player.
- We **do not circumvent DRM or any access control**.
- The app **cannot save, rip, convert or export** anything — there is no such function.
- There is **no playlist import and no M3U/Xtream screen**. It is not an IPTV player.
- **The live channels play in YouTube's own player**, embedded from the broadcaster's own channel, with the broadcaster's controls and monetisation intact.
- **The films play in the app's native player, streaming the file served by archive.org** from archive.org's own servers.

(One honest note, because the two behave differently: for live content we hand playback to YouTube entirely. For the films we play the file ourselves, which is why that set is limited to material the library has declared public domain.)

PAGE 2 — WHAT IS IN THIS BUILD, AND WHAT IS NOT

Class	Content	Count	Playback
A	Official broadcaster live news , embedded from the broadcaster's own YouTube channel	8	YouTube's embeddable player
B	Public-domain films , streamed from the Internet Archive	8	In-app native player

Not in this build (each phrase means: not in this binary):

- Any channel carried only because a third-party HLS URL was not published on the broadcaster's own site.
- Any commercial free-to-air channel.
- Any re-upload, aggregator or clip channel.
- Any cinema, dizi or musalsal storefront.
- Any television entertainment series.
- Any item whose source could not be evidenced.

This is deliberate. The catalogue is small because every item in it is documented. Our website carries a larger catalogue; the app is not the website, and does not present itself as one.

PAGE 3 — CLASS A: OFFICIAL BROADCASTER LIVE EMBEDS

All eight rows play in YouTube's own player, from the broadcaster's own YouTube channel. We store the *channel*, not a broadcast — there is no video id in the app that can go stale.

#	Broadcaster	Primary official URL	Official channel	Embedded as
1	France 24 English	france24.com/en /	youtube.com/@France24_en	youtube.com/embed/live_stream?channel=UCQfwfsi5VrQ8yKZ-UWmAEFg
2	DW News	dw.com	youtube.com/@dwnews	youtube.com/embed/live_stream?channel=UCknLrEdhRCp1aegoMqRaCZg

#	Broadcaster	Primary official URL	Official channel	Embedded as
3	TRT World	trtworld.com	youtube.com/@trtworld	youtube.com/embed/live_stream?channel=UC7fWeaHhggM4Ry-RMpM2YYw
4	Al Jazeera English	aljazeera.com	youtube.com/@aljazeeraenglish	youtube.com/embed/live_stream?channel=UCNye-wNBqNL5ZzHSJj3l8Bg
5	CNA	channelnewsasia.com	youtube.com/@channelnewsasia	youtube.com/embed/live_stream?channel=UC83jt4dlz1Gjl58fzQrrKZg
6	NHK WORLD-JAPAN	nhk.or.jp/nhkworld	youtube.com/@NHKWORLDJAPAN	youtube.com/embed/live_stream?channel=UCSPEjw8F2nQDtmUKPFNF7_A
7	Africanews	africanews.com	youtube.com/@africanews	youtube.com/embed/live_stream?channel=UC1_E8NeF5QHY2dtdLRBCCLA
8	ABC News (Australia)	abc.net.au/news	youtube.com/@abcnewsaustralia	youtube.com/embed/live_stream?channel=UCVg039Bk5sMo66-6o6Spn6Q

All eight were checked on **2026-09-16**: each channel was confirmed to have a live broadcast, and the broadcast was confirmed to belong to that channel before use.

How each of the eight was verified as genuinely 24/7. Each one's live broadcast was read through YouTube's own metadata. All eight returned a rolling news title — e.g. *"LIVE: Watch TRT World"*, *"[CNA 24/7 LIVE]"*, *"LIVE: NHK WORLD-JAPAN News"* — indicating a continuous channel rather than a one-off event stream. A ninth candidate, **DW Documentary**, was **rejected on exactly this test**: its "live" broadcast was titled *"War in Sudan ... An online discussion"* — a scheduled event, not a 24/7 channel — and it does not appear in this app. Every channel identity was confirmed by reading the channel's own feed metadata, never by scraping a channel page.

What each row is: the broadcaster's own 24/7 news stream, published by the broadcaster on its own channel, played through YouTube's embeddable player.

Supporting evidence:

- **YouTube's Terms of Service** permit playback of embeddable videos through the embeddable player, and the uploader grants a licence *as enabled by a feature of the Service (such as video playback or embeds)*.
- **Embeddability is the rights holder's own setting.** A video whose owner has disabled embedding cannot be played in the app at all.
- **France 24's own press release** announces that it broadcasts live 24/7 on YouTube. It is cited **for the France 24 row only**; it says nothing about any other broadcaster.
- The official channel for each row was verified by reading the channel's own feed metadata and confirming the channel's name — not by scraping a page, which returns other channels' identifiers.

The app shows this to the viewer. Every live channel displays a Source line with a link to the broadcaster's own channel, and a one-tap way to report a rights issue.

PAGE 4 — CLASS B: PUBLIC DOMAIN, WITH VERBATIM RIGHTS TEXT

Playback is in-app — the app's native player streams the file that archive.org serves. It does not open the item page. The rights text below is quoted **verbatim from each item's own details page**.

#	Title	Year	Rights text on the item page	Duration	Item page	File the app streams
1	American Look (Part I)	1958	"Public Domain"	8.2 min	archive.org/details/American1958	archive.org/download/American1958/American1958.mp4
2	A Word to the Wives	1955	"Public Domain"	13.5 min	archive.org/details/Wordtoth1955	archive.org/download/Wordtoth1955/Wordtoth1955.mp4
3	Bookbinders	1961	"Public Domain"	13.4 min	archive.org/details/Bookbind1961	archive.org/download/Bookbind1961/Bookbind1961.mp4
4	Out of This World	1964	"Public Domain"	13.3 min	archive.org/details/out_of_this_world	archive.org/download/out_of_this_world/out_of_this_world.mp4

#	Title	Year	Rights text on the item page	Duration	Item page	File the app streams
5	Design for Dreaming	1956	"Public Domain"	9.3 min	archive.org/details/Designfo1956	archive.org/download/Designfo1956/Designfo1956.mp4
6	San Francisco Earthquake Aftermath, Part 3	1906	"Public Domain"	7.7 min	archive.org/details/SanFranc1906_3	archive.org/download/SanFranc1906_3/SanFranc1906_3.mp4
7	Skateboard Sense	1950	"Public Domain"	9.2 min	archive.org/details/skateboard_sense	archive.org/download/skateboard_sense/skateboard_sense.mp4
8	More Dangerous Than Dynamite	1950	"Public Domain"	9.8 min	archive.org/details/more_dangerous_then_dynamite	archive.org/download/more_dangerous_then_dynamite/more_dangerous_then_dynamite.mp4

All eight file URLs were requested on **2026-09-16** and returned real video data (HTTP 200/206).

All eight are from the **Prelinger Archives**, the well-known public-domain moving-image collection. Each is a **sponsored, industrial or educational short film** — none is a cinema feature, a series, or a television entertainment property. The longest is 13.5 minutes.

Every file was verified on the actual file, not on the library's label. We requested each file and read its real video codec. This mattered: the Internet Archive offers several versions of many items, and several versions we first selected turned out to be **MPEG-4 Part 2** — a format iOS decodes the audio of but **not** the picture. Those were removed. All eight files above were measured on the file itself and are **H.264 (avc1), Constrained Baseline, 640×480** — the most compatible video profile in existence, chosen so a reviewer on any device sees picture, not just sound.

To verify any row: open the item page. The licence line is printed on the page itself, in the library's own words. The app links to it from the "Source" row on the title.

Scope note, stated plainly: the archive set in our catalogue was audited in full. Of 1,721 items, 811 had a file in a format iOS can play, of which **492 also carry a public-domain declaration**. We found 18 items requiring attribution we do not yet display, and 2 under a NonCommercial licence. **The NonCommercial items are excluded** — Whisco TV is funded by advertising, which is a commercial use, and those licences do not permit it. Attribution-required items are held until the app displays creator credit. **This build carries only the eight items above.**

PAGE 5 — WHAT IS NOT IN THIS BUILD, AND WHAT WE REMOVED

Removed from iOS build 6:

- Every channel carried only because a third-party HLS URL **was not published on the broadcaster's own site**.
- Channels whose stream is served from a file host rather than a broadcaster.
- Channels marked as not operating 24/7.
- 52 titles whose owners had disabled embedding — they could not play in the app at all.
- Titles with no playable source.
- Items whose file iOS cannot decode.
- The cinema, dizi and musalsal shelves in their entirety.

Held back pending written permission: broadcasters we would like to carry, held out rather than included because a stream happened to be publicly reachable.

Commitment: if anything in this build is a concern, tell us and **we will remove it within 24 hours**, without argument, and tell you what changed. There is a **"Report a rights issue"** row inside the app on every title, and the address is legal@whisco.tv.

PAGE 6 — HOW TO CHECK US

- 1 Open **Live TV**. Eight news channels are listed.

- 2 Tap one. YouTube's own player loads, showing the broadcaster's channel name and its native controls. You are watching the broadcaster's own feed.
 - 3 Below the channel, tap **Source**. It opens the broadcaster's own channel for you to check.
 - 4 Open **On Demand**. Eight public-domain films are listed. No cinema or series storefront.
 - 5 Tap a film. It plays in the app's player from archive.org.
 - 6 Below the title, tap **Source**. It opens the item's archive page — where the "**Public Domain**" line is printed.
 - 7 Tap **Report a rights issue** on any title, or write to legal@whisco.tv.
-

NOT STATED IN THIS DOCUMENT

- No third-party HLS directory is named or cited as a source or a defence, at any point.
- No free-to-air argument. A broadcaster publishing its own stream is not a licence for us to redistribute it.
- No claim of permission we do not hold, and no implication of a partnership that does not exist.
- No case law.
- **No API-key-based verification claim** — the audit above was performed offline when choosing what to include. The app runs no verification code at runtime; it embeds these eight channels and plays these eight files.
- No count of content the app does not carry.
